

## **MikrofyN has become part of a Great Family**

Hexagon A/B has acquired the entire share capital of MikrofyN A/S as per September 1<sup>st</sup>.

It is well known, that Hexagon acquired Leica Geosystem last year, and we are proud to have been chosen to join the group.

It is of paramount importance both for MikrofyN and Hexagon that we continue as before with our own R&D, production, label and dealer network.

Independent of the acquisition we have taken measurements to improve our sales effort.

”The acquisition of MikrofyN is part of Hexagon’s growth strategy and commitment to global expansion within machine automation technology.

MikrofyN is the largest European manufacturer of one and two dimensional solutions for construction machine automation and complements Hexagon’s product portfolio of GPS technology that manoeuvre infrastructure machines with increased efficiency and precision. MikrofyN’s product range consists of a portfolio of automatic and manual machine control systems for excavators, graders, dozers and paving machines.

MikrofyN also complements Hexagon’s existing construction laser product range and adds a second brand to our portfolio”, says Ola Rollén, CEO and President of Hexagon AB.
